

GREENPOINT TECHNOLOGIES HANGAR CAPACITY GROWTH

July 2, 2009

Kirkland, WA

Greenpoint Technologies (GTI) adds an additional hangar location to their available capacity.

Partnering with Cascade Aerospace USA, GTI inducted its sixteenth (16) VIP Boeing Business Jet (BBJ) earlier this year at the Spokane International Airport hangar facility in Washington State. The newly renovated hangar has approximately fifty-two thousand (52,000) square feet of space for VIP completions and modifications. The strategic alliance with Cascade offers GTI additional hangar capacity to support the projected completion backlog. The aircraft will deliver in the fall of 2009. This experienced and dedicated team ensures clients a predictable and quality completion.

GTI also completes VIP modifications at their jointly operated hangar at Aviation Technical Services (ATS) located on the same airfield as Boeing's 747-8 and 787 manufacturing facilities. Expanded hangar capacity is necessary to support the increased BBJ deliveries starting in 2010.
